Enhanced Real-time Situational Awareness

Teradek provides innovative live video technology tailored to the demands of public safety officials nationwide. We lead the market with comprehensive video solutions: from ruggedized encoders for reliable field video capture, cloud-optional video management and routing, and seamless video sharing via the secure and easy-to-use Core Share app. Teradek empowers law enforcement, fire departments, and federal agencies with indispensable tools for success in critical operations by enabling enhanced situational awareness, swift decision-making, and effective coordination during incidents.

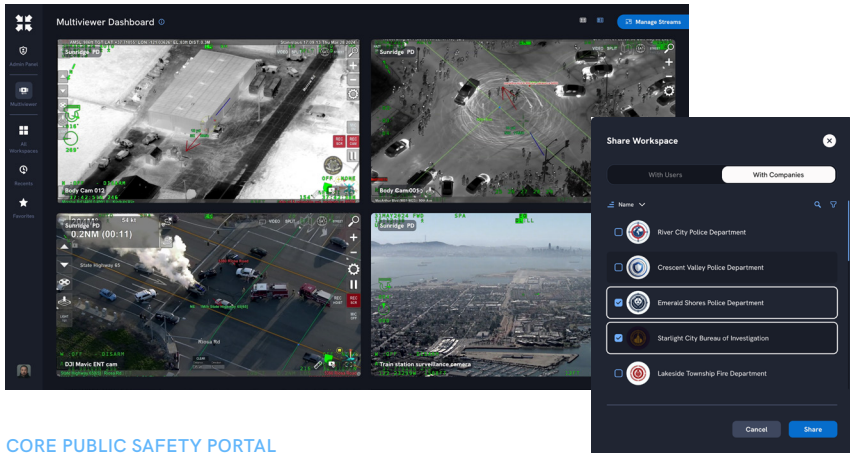

PRISM MOBILE 5G

Manned or Unmanned: Economic Video Transmission & Sharing

Send secure video from drones, helicopters, and ground-based sources directly to command centers and responders in real-time. Our compact and ruggedized solutions offer seamless deployment in any critical scenario - letting you do more with less, so that you can focus on your mission without bulky equipment weighing you down or taking up valuable space.

HDMI / SDI Input Options • Under 2 lbs • As big as 3x iPhones

CORE PUBLIC SAFETY PORTAL

Real-Time Video Management and Sharing

Teradek’s Core for public safety is an intuitive cloud platform that empowers agencies with a comprehensive video management solution — without the need for specialized equipment or software. With Core, agencies can oversee live and recorded video feeds in real-time, ensuring heightened situational awareness during critical operations.

Agents can collaborate efficiently by using Core’s native sharing solution through a web browser, mobile app, or deployable hardware. With robust security measures and Single Sign-On (SSO) integration, Core ensures that sensitive video data remains protected at all times.

With Core, you can:

- Make rapid critical decisions with low latency video
- Cross-monitor different feeds with multiview on any device
- Share video feeds easily with a simple and secure link, no app required
- Control your entire encoder fleet remotely from a single platform
- Archive recordings instantly for evidence and training purposes with no added cost
